

**Data Analytics,  
IoT & AI/ML  
Technology Solutions  
in Healthcare**

**Healthcare is increasingly leveraging information technologies for delivering smart systems aimed at speeding up health diagnostics and treatment.**

**Data and IoT & AI/ML technologies improve Healthcare by:**

- Better collection and implementation of electronic health records
- Creating real-time evaluation of effective practices
- Predicting patient risk
- Creating better patient care and outcomes
- Reducing medical errors

Data Analytics and IoT & AI/ML applications provide intelligent services for health monitoring and medical automation in different contexts in the healthcare sector that lead to a substantial reduction of physician visit costs and a general enhancement of the quality of patient care.

The way healthcare is approached worldwide has been transformed with the integration of embedded hardware technologies and the development of smart medical sensors. The utilization of devices using IoT and wearable technologies is expected to reach 162 million by the end of 2020. The collection and analysis of patient data has enabled the healthcare system to operate more efficiently, maximizing revenue while simultaneously increasing population health and patient care.
